OBTAINING MATERIALS FROM WSSC WAREHOUSES

This Materials Catalog lists all tools, materials and supplies carried in the Commission's warehouse inventory. It should be noted that not all items are stocked at all warehouse locations. All items are stocked, however, at the Commission's main warehouse facility at Anacostia and can be shipped to any satellite warehouse upon request.

The index lists materials alphabetically, with series (first 4 digits of stock number) and page number. Some materials will be found on the specific page listed. In other cases the page number is the beginning page of a stock number series and it will be necessary to check the description column to find the exact type and size needed.

All customers are strongly encouraged to enter their orders electronically in advance. This will allow the Materials and Services Group to begin work on the order prior to your arrival and will help to eliminate or reduce your wait time at the warehouse.

- If requesting warehoused materials electronically, follow the established procedures (procedures and sample are enclosed). To request on-line access or training, complete the Access Request form located in the Outlook public folder at Forms\Materials & Services.
- If using a Materials Issue and Return Form (procedures and sample are enclosed). This form may be obtained free of charge from any of the warehouses. (Part number 7540-8082-7)
 - Accurately complete form.
 - Have Supervisor approve request.
- Materials are issued by part number, not description. Make sure the part number is the correct one for the material that is being requested.

Failure to follow any of the above guidelines will justify any refusal by Materials and Services Group personnel to issue or accept material. Information from the Materials Issue and Return Request Form is used to produce management reports for your Unit and Group Managers. It is therefore important that information on this form is accurate.

CODE DESIGNATIONS USED IN THE MATERIALS CATALOG

DISCONTINUED ITEMS

Discontinued items are identified by a "(D)" following the description in the stock catalog. These items will be included in the catalog until existing supplies are used up, but will not be reordered. Any questions concerning why an item was discontinued should be directed to the Materials Management Unit on extension 4270.

HAZARDOUS MATERIALS

Washington Suburban Sanitary Commission

MATERIALS CATALOG

Certain items stocked at the warehouses have been identified as hazardous materials. These items are marked by an "(H)" following the description in the stock catalog. Material Safety Data Sheets for these items are available at each warehouse.

ASSEMBLIES

An assembly is a collection of two or more part numbers that are combined and may be ordered using the assembly number rather than the individual part numbers. These items are identified by an "(A)" following the description in the stock catalog.

ITEMS NOT NORMALLY STOCKED, BUT WHICH CAN BE ORDERED ON REQUEST

Certain items are listed in the Materials Catalog for which specifications exist and which can be ordered on request (FF). In some cases these items may be made available in a matter of days and in other cases, the time required for obtaining the items may be considerably longer.

UNITS OF ISSUE

AY Assembly: NOTE: ASSEMBLIES ARE NOT ACTIVE AT THIS TIME, PLEASE CONTACT THE MATERIALS MANAGEMENT UNIT IF ASSISTANCE IS NEEDED IN DETERMINING THE STOCK ITEMS THAT WERE INCLUDED IN THE ASSEMBLIES. An assembly is a collection of two or more part numbers that are combined. Note that in some cases, an assembly (as defined in the computer system) has instead been given a unit of issue of "SE".

PUSH-ON JOINT PIPE, CLASS 54, DUCTILE IRON

Note: All of the approved ductile iron pipe (DIP) manufacturers are now using the Tyton joint for their push-on pipe except for the American Pipe Company. Tyton gaskets should be used for all brands of push-on pipe except for American Pipe which should only be used with their Fastite gaskets. Where restrained joint gaskets are used on push-on pipe with diameters from 4” through 24”, FIELD LOK 350 gaskets should be used on United States Pipe, Sure Stop 350 should be used on McWane DIP, and Fast-Grip gaskets should be used on American DIP. Fast-Grip gaskets should never be used on US nor McWane Tyton joint pipe and FIELD LOK 350 and Sure-Stop 350 gaskets should never be used on American Fastite pipe.
