

Discolored Water → Flush Your Pipes

Discolored water is common after a water main repair in your area. Follow these simple steps to flush your pipes and relieve trapped air.

Begin with the **SINK** faucet on **lowest** floor.

SLOWLY open the **COLD** water **SINK** faucet.

Opening slowly allows for the release of trapped air and may reduce the banging noise, known as a “water hammer” that can occur when water flow and pressure changes as a result of water main repair work.

Repeat on **each floor**, moving from **lowest to highest**, only opening **COLD** water **SINK** faucets.

Once the **water runs clear**, usually in 5 minutes or less, **turn off** faucets in the same order, **lowest to highest**.

You should also flush your refrigerator’s water lines.
